Tai scripts in Viet Nam

Introduction

There are various Brahmic writing systems used for the *Tai Dam, Tai Don, Tai Daeng* and *Tai Yo* languages in Viet Nam. Users of these scripts are also found in Laos, Thailand and China. Although these languages are tonal, none of these writing systems traditionally have any tone indicators. Recently, the modernized scripts have borrowed the tone mark system from the *Lao* and *Thai* alphabets.

A unified and standardized alphabet mainly based on the *Tai Dam* script was approved for encoding the Unicode Standard as *Tai Viet*. Currently in 2021, the Tai Viet Unicode block does not include glyph variants which are found in *Tai Don* and *Tai Daeng* and should be disunified. Before being officially allotted to new code points in Unicode, these variants can be represented as their *Tai Viet* code points typed along with the special character ZWJ (zero width joiner) as long as these features are supported by the font.

For example: <uAAAB> = \(\partial (Tai Dam, Tai Don)\) vs <uAAAB> + <ZWJ> = \(\tau (Tai Daeng)\)

Table 1. Tai Viet Unicode letters and their regional variants in pink cells

The *Tai Viet* Unicode block is not suitable for the *Lai Tay* and *Lai Pao* scripts which are traditionally used for the *Tai Yo* language in different regions. In contrast to other Tai scripts, the *Yo Lai Tay* script is written vertically from top to bottom and ordered from right to left like the traditional Chinese writing. Both of these Brahmic alphabets should be proposed for new Unicode blocks.

Figure 1. A Tai Yo manuscript using the traditional Lai Pao script

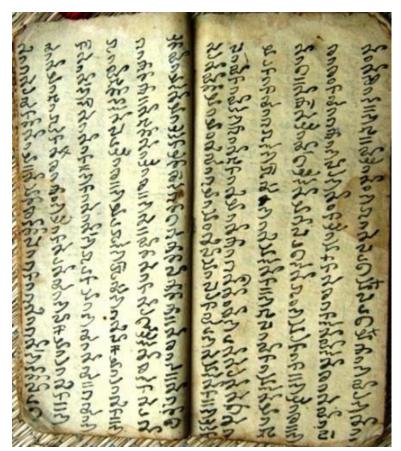

Figure 2. A Tai Yo manuscript using the traditional Lai Tay script

Initial consonants

In Table 2, modernized letters are written in red beside their traditional counterparts in blue (if available). Letters in pink cells require ZWJ to render. Letter in yellow cells use different code points.

Table 4. Vowels

4: Vowel letter AT ทฬ in *Tai Don* has not been assigned in Unicode.

- 5 : The unassigned $\overset{\bullet}{n}$ in $Tai\ Don$ is a variant of vowel AA with the inherent Proto-Tai tone C1.
- ⁶: Before being officially supported by Unicode, these vowel signs are formed as follows:

$$\tilde{n} = \langle uAA80 \rangle + \langle uAAB2 \rangle + \langle uAAB2 \rangle$$
 $\tilde{n} = \langle uAA80 \rangle + \langle uAAB3 \rangle + \langle uAAB3 \rangle$
 $\tilde{n} = \langle uAA80 \rangle + \langle uAAB4 \rangle + \langle uAAB4 \rangle$
 $\hat{n} = \langle uAA80 \rangle + \langle uAAB8 \rangle + \langle uAAB8 \rangle$

7: Positional variants of vowel OU before final consonants -NG and/or -M

$$\hat{n}u = \langle uAA80 \rangle + \langle uAAB6 \rangle + \langle ZWJ \rangle + \langle uAAA3 \rangle$$

⁸: Standalone initial consonants along with an optional tone mark in *Yo Lai Tay* have the inherent vowel O with no final consonant.

Table 5. Final consonants

9: Visarga 🛭 in Tai Daeng represents ending glottal stop.

Tone marks

Proto-Tai has 4 phonemic tones: A, B, C and D. D tone in modern Tai languagese may have different phonemic indicators depending on the length of the rime (S for short and L for long) and the voicing of the initial consonant in *Proto-Tai*: DL1/DS1 for voiceless ones and DL2/DS2 for voiced ones.

Tone A of *Proto-Tai* is not indicated by any marks in all of these modernized scripts. Tone B and tone C of *Proto-Tai* are indicated respectively by tone mark/letter 1 (*Tai Viet Unicode MAI EK* or *MAI NUENG*) and tone mark/letter 2 (*Tai Viet Unicode MAI THO* or *MAI SONG*) as in the *Thai* alphabet. Tone ending letters, which now is old-fashioned, are written at the end of the word.

Letters	T. Dam	T. Don	T. Daeng	T. Yo Lai Tay	T. Yo Lai Pao
Tone A		0	::	::	::
Tone B	ń	'n	ń	E	26
Tone B (old)	:::0	ೕ	:::ℓ		
Tone C	ň	ň	ň	5,	26
Tone C (old)	း၅	ി	::: j		
Tone DL1	ทุท	nn	'nп	£3£ 10	3€3€ ₈
Tone DL2	<i>o</i> ʻn	nn	ņп	E3F 10	3,3e 0
Tone DS1	ทุ์ท ¹¹	n'n 11	ทุท	£3E	<i>3</i> €3€
Tone DS2	ดู้ท ¹¹	หุ๊ท ¹¹	ทูท	<i>£32-</i>	<i>J.</i> 3e

Table 6. Tone marks

- ¹⁰: Only rimes with final -k n in *Tai Don* and *Tai Dam* require tone mark for short rimes and no tone mark for long rimes since the final consonant becomes a glottal stop in long rimes.
- 11 : All dead long rimes in the modernized *Yo Lai Tay* and *Yo Lai Pao* require tone mark 1 f while all dead short rimes require no tone mark.
